

## Advanced Microflow System Created in Poland

In an advancement that is bound to have numerous positive outcomes, researchers in Poland recently managed to develop a new, credit card-sized microflow system. The tool allows scientists to combine a number of chemicals in a single solution. It carries a host of channels, in which drops of l... [ [read more](#) >> ]

**Image comment:** Three streams of microdrops joining together in the microflow device. The volume of each drop may be controlled, which allows the concentrations in final drops to be changed precisely
